

In this project you are going to manipulate images from the internet to create an original surrealistic digital image... a convincing realistic image that illustrates an impossibility.

Read through and follow the requirements below.

1. Research **surrealism** on the internet to see what kinds of images already exist out there in cyberspace
2. Find **jpeg** photos on the internet and save them in your G: drive for later use. Make sure the file is not a **giff**

** If you are stuck for ideas, you may pick words from my envelope to come up with a surrealistic combination.*

3. Open a new project in Photoshop with the following criteria:

Name: surrealism_yourname
Size: 5 x 5 inches
Resolution: 300 dpi
Colour: RGB

4. Open up the photos that you had previously saved in your digital art folders on your G: drive. Drag and layer these photos into your project. Use the opacity function and play with the eraser settings to create seamless combinations.

This project will be graded on the originality of your idea and the quality of the illusion you have created along with the principles of design (composition, colour, line, balance, etc)
